I prefer Paint Shop Pro for the simple reason it lets you see your file on the computer as it once was. I have no problem making the switch from my old PSE 8.5 pro to SPS 11 on my new system. So there's no reason why I have to purchase Photoshop again. If I make mistakes with SPS I simply set them right with PS. PS lets you paint where their little Paint Shop people can't. I upgraded to Lightroom 5 and I have to admit it was not a smooth ride. I had to fix several issues in the new software before I got my UI quite right. I found several things about my old version that must have changed in the new version. Since the interface is so different I found it quite difficult at first and I had to spend a lot of time identifying the new UI elements from my old UI. It took me a few hours to get used to it however I am now very happy with the new interface. I like the smart filters and especially the new fuzzy edges and the crop tool. Overall after a few days of use I find Lightroom 5 to be very usable. I would not recommend it unless you are willing to get accustomed to the new interface. I followed the instructions for the upgrade and am using Photoshop CS6. I have a Core 2 Quad with 8GB RAM and a 750GB 7200 rpm HDD. I am using Windows 7 and although Photoshop CS6 took its sweet time to open, it has proven to be snappy. The menus are the same as in CS5, but I'm happy to say Photoshop CS6 has improved my workflow. I use Lightroom 5.2 to organize and catalog images, then I edit them when suitable. Now I am not prone to do a lot of detailed edits on images, so this is to my advantage. The dark room is great, does a bang-up job in contrast and detail, adjusts colors like never before, and amazes me with how fast it works. The only problem I ran into was with the individual layers in one specific image: when I opened an image and tried to edit more than one layer at once, Photoshop froze and I had to restart my PC. Other than that, though, I'm very happy with Photoshop CS6.

Adobe has introduced a new professional-level option for effecting changes to documents that lets you place text, shapes, and other items on a third-party document and then apply changes to them. This is good if you've got a document you want to be able to make changes to quickly without having to drag and drop files around, and it's the first application of the idea. Photoshop's On Location Feature gives you tools that will let you edit your images on the go. With the new Grid You Can Draw feature, you can drop a grid of points within an image, which lets you create a line grid that you can use to isolate a specific part of an image. This is especially useful when you want to focus on a specific object in a photograph. Adobe's Filters panel has a number of new features in 2019 including: Super Resize is a unique feature that lets you resize your image in real time without losing quality, and it is now possible to create a single wide canvas that retains your original resolution. Possibly one of the most mind-blowing new features from Photoshop for the year ahead is the introduction of Neural Filters. It's actually a new workspace within Photoshop with filters powered by Adobe Sensei. Equipped with simple sliders, you can make magic happen such as changing your subject's expression, age, gaze or pose in the time it takes you to say "AI technology". To access Neural Filters head to Photoshop, and choose Filters > Neural Filters. It was recently announced that in 2013, Photoshop will be tackling the biggest challenge facing the industry today - Resizing Images for the Internet. With well-defined and exciting new features coming out in the future, to be found in the names of PS Sharpening, Smart Sharpen and Object Type, expect this feature to be the strongest comeback in a long time. One of the biggest complaints about using (or not using) Photoshop is that there's a learning curve for using the tool to its full potential.

“With Share for Review, photographers and creatives can tackle even the most complex projects and share assets more efficiently,” continued Marc Pienkoski, Adobe product manager. “Users can now create and edit to a common revision in a collaborative way without leaving Photoshop to share any of the complex edits.”

- Snapshot Inspection - Provides an instant review during creation and feedback on edits to avoid backing out of a complex edit.
- Collaborate with Fireworks - Any changes made to material that is stored in the system are synchronized along with edits made in Photoshop and while the file is open in Bridge, enabling users to view and maintain common changes on each side.
- Collaborate with InDesign - Any edits made to material that is stored in the system are synchronized along with edits made in the InDesign document.
- Collaborate with other Adobe apps - Any common assets in Bridge are synchronized and made available to all users whether that be across groups in others apps, or across your own documents.
- Initiate a revision - Any edits initiated in Share for Review are synchronized across all the collaborative changes made in Photoshop and with InDesign documents allowing users to abandon their changes and pick up in the next revision.

“Brushes, gradients, and hyperlinks are a few of the assets that are commonly swapped between Photoshop and Bridge. This is our free update to Adobe Bridge to give users a seamless solution to work with those assets. The new update allows a painter to make changes to a brush shape on their side in Bridge and the changes are reflected in Photoshop,” said Lennert Top.

“In the future, this new feature to effectively share data and assets will become a cornerstone for wearable, virtual, and augmented reality innovation,” said Top.
