To get started, darken your image as much as possible, then click the Candelabra sliders on the left side of the screen. Choose your image's new Background Color from the resulting list, then drag the slider until you find a balance of color saturation and background darkness. If the jacket looks too light, click the Brighten and Clarity slider until the jacket is just right. You can also experiment with other editing tools before, during, and after selecting a Background Color. Click the New Menu button at the top, go to Display and choose the new layer setting "Background Layer Compression." This will do the same thing as the Background Color function but may be a bit easier to use, and it's reversible. The simplest way to create a new photo or image using the Pen is to click the Pen icon button at the top left. Click the Pen tool, then click and hold on the part of your photo you want to change. Photoshop Elements then switches to editing mode and can be used to make changes to your photo. To undo changes, click the Undo icon at the top left. Editing photos or creating an image in Photoshop Elements can be very laborious but possible using the Pen. It's easy to accidentally create unwanted changes to your photo that can be reversed or fixed in Photoshop. It's possible to dramatically limit the amount of undo and redo using the Pen. The Pen is great for editing photos and creating digital art. To let you adjust the vividness of a color's hue (the color's intensity), click on the sliders at the top right of the screen. These controls allow you to tint (hue) and shade (intensity) photos. This is handy to use if you want to change the color of a house or clothes color. You can also pull white vignette for emphasis. Snap (hold down for a second then release) the center of the photo to lock the view.
