Q: User profile image I have a recent update to happen to my site as well as my database on the server. As such, I need to change my users' profile images, username, email addresses, and so forth. What is the best way to do this? A: Coding it in SQL (on table creation) would be my preference. But, there are plenty of UI customizations for this; you could get away with just the UI. I'd generally "pre-declare" my changes for an update and then apply them, so there isn't a mess of comma's everywhere. INSERT INTO users (userID,firstName,lastName,userPhoto,userEmail,userBio) VALUES ('1234', 'Bobby', 'Bob', '123456789.jpg', 'test@test.com', 'This is me!');

1. Field of the Invention The present invention relates to a shift register and, more particularly, to a shift register for liquid crystal display (LCD). 2. Description of Related Art In general, for a liquid crystal display (LCD), as shown in FIG. 1, a shift register 10 comprises a plurality of shift register units 11 serially arranged in a first direction. Each shift register unit 11 comprises a pull-up transistor 111, a pull-down transistor 112, a pull-up control transistor 113, and a pull-down control transistor 114. The pull-up transistor 111 is used to pull up a transmission line COMn for n-bit data. The pull-down transistor 112 is used to pull down a transmission line COMn for n-bit data, and has a third gate terminal and a fifth gate terminal. The pull-up control transistor 113 has a first gate terminal connected to the third gate terminal of the pull-down transistor 112 and a second gate terminal connected to a power source VDD. The pull-down control transistor 114 has a third gate terminal connected to the third gate terminal of the pull-down transistor 112, and a fifth gate terminal connected to the power source VDD. In the conventional technique, the pull-up transistor 111 and the pull-down transistor 112 are MOS transistors, which have the same channel area, and an electrostatic discharge (ESD) gate structure is provided between the first gate terminal of the pull-down transistor 112 and the third gate terminal of the pull-up
